STUDY TYPE

Population and Housing Census [hh/popcen]

SERIES INFORMATION

The 2010 Zambian census was the fifth national population census conducted since Zambia's independence in 1964. It was carried out from October 16 to November 15, 2010, with complete enumeration achieved by November 30, 2010. The census collected data on population size, demographic characteristics, socioeconomic factors, and housing conditions.

ABSTRACT

A Census of Population and Housing is defined by the United Nations as the total process of collecting, compiling, evaluating, analysing and publishing demographic, economic and social data pertaining, at a specified time or times, to all persons in a designated area or the whole country. It is the primary source of information about the Population of a country. The 2010 census covered the entire country divided into 10 provinces, 76 districts and 1,421 wards.

Scope

NOTES

The 2010 Census used a single questionnaire to capture individuals, household and housing characteristics from the population. Persons who were present at the time of the enumerator's visit were counted directly as Usual Household Members present at the Housing Unit/Dwelling or as Visitors of the Household. This is what is called De Facto Population. While those who were absent were enumerated by proxy, that is, as Usual Household Members Absent from the Housing Unit/Dwelling at the time of the enumerator's visit. The Usual Household Members present at the Housing Unit/Dwelling at the time of the enumerator's visit together with the Usual Household Members Absent from the Housing Unit/Dwelling is what is called the De Jure Population or True Population. 2010 census used both De jure and De facto.

Questionnaires

QUESTIONNAIRES

Zambia's 2010 census used a single questionnaire with sections on:

- Individual details (age, sex, education, etc.)
- Household characteristics (size, amenities, etc.)
- Housing conditions (type, ownership, etc.)

The questionnaire aimed to capture key demographic and socioeconomic data.

Data Processing

DATA EDITING

Field editing: supervisors checked questionnaires for completeness and consistency

Office editing : Data entry clerks and editors reviewed, cleaned and coded data

Computer based checks using software such as Cspiro and SPSS to detect errors , inconsistencies

Note that in 2010 Data capture and processing of the questionnaires used Optical Mark Reading (OMR) and Intelligent Character Recognition (ICR) technology. By using OMR and ICR technologies, the data capture process becomes more efficient and faster compared to manual data entry methods.
